

# Paper Roll Wrap & Headers

Widths up to 136 Inches

NDEVCO Packaging Solutions produces high-performance Roll Wrap and Roll Headers specifically designed for paper mills. Our Roll Wrap is manufactured from polyethylene-laminated kraft linerboard, providing strong, reliable protection during storage and transport. The construction is engineered to eliminate common issues such as delamination and wax bleed-through, ensuring consistent performance and preserving product quality.

We offer Roll Wrap solutions using both virgin and recycled linerboard to meet diverse sustainability and performance requirements. For customers seeking environmentally responsible alternatives, our repulpable grade roll wraps are developed to deliver moisture protection comparable to polyolefin materials while remaining compatible with standard repulping processes.

Engineered to withstand demanding handling and export conditions, our Roll Wrap solutions provide durability, moisture resistance, and dependable protection across global supply chains. This combination of strength, sustainability, and performance makes them a trusted choice for paper mills worldwide.

## A Sustainable Packaging Choice

Made with PCR & Recycle Ready Structures

\*INDEVCO Packaging Solutions sources paper and paperboard from Forest Stewardship Council (FSC) or Sustainable Forestry Initiative (SFI) certified suppliers.

\* For recycled linerboard, certification is dependent upon availability specifically of suppliers' Chain of Custody Certification for Recycled Fiber.

## Features & Benefits

Available in recyclable polyethylene and repulpable grades	Proven runability with excellent flatness and crimpability
Full range of widths available up to 136" to service wide width presses	Logo printing available in one and two colors
Roll headers available	Custom stocking and inventory programs available
Quality assured by on-line process controls and rigid SPC procedures	New repulpable roll wraps with the same moisture protection as polyolefin or wax
